Object Test Case for Water Bottle :

1. Check the shape and size of the water bottle.

2. Check if the caps fit with the bottle or not.

3. Check whether the bottle has any logo or not.

4. Check if the color of the bottle is as per the specification document.

5. Check that the water bottle's weight is as per the SRS document.

6. Check if the bottle is made as per the specification document or not.

7. Check the mouth of the bottle as per the SRS document.

8. Check whether the user can pour the water easily or not.

9. Check whether the bottle can be appropriately surfaced or not.

10. Check whether the user can hold the bottle comfortably or not.

11. Check whether the bottle leaks by filling it with water and putting it in a dry space.

12. Check if the bottle leaks by tilting, inverting, or squeezing (in the case of the plastic bottle).

13. Check the bottle by placing it in a refrigerator for cooling and see how it reacts at different temperatures.

14. Check the water bottle by pouring hot water into it and check the effect.

15. Check the water test after keeping it in the bottle and see if there is any chemical change.

16. Check by putting the water in for some time and check if the smell of the water has changed.

17. Drink water directly from the bottle and see if it is comfortable. Or water gets spilled while doing so.

18. Check if the bottle is broken by putting some specific height (both with plastic and glass models).

19. Check if the bottle is made up of recyclable material. In the case of a plastic bottle, test if it is easily crushable.
